PROFESSIONAL SUMMARY

Full-stack Flutter developer with a strong foundation in clean architecture and BLoC state management. Experienced building production-grade mobile apps from responsive Flutter UI through REST API integration to Django and Node.js backends. Comfortable owning a feature from data model to deployed screen, with a focus on maintainable code and resilient, well-tested state handling.

TECHNICAL SKILLS

Languages	C, C++, Dart, Java, JavaScript, Python
Frameworks	Flutter, FastAPI
State Management	BLoC / Cubit, GetX
Backend & APIs	REST APIs, Node.js, Express.js, Firebase, Supabase
Databases	PostgreSQL, MySQL, MongoDB
Tools	Git/GitHub, Android Studio, VS Code, Figma, Postman, Docker
Problem Solving	Competitive programming practice on Leetcode

EDUCATION

Bachelor of Engineering in Computer Engineering | Far Western University — *Dec 2022 – Present*

Intermediate of Science | Little Buddha Academy — *2020 – 2022*

EXPERIENCE

Flutter Developer Intern | MS Engineering and Complete Solution — *Jul 2026 – Oct 2026*

- Developed the mobile app UI with API integration for a restaurant management tablet app, built in Flutter with a feature-based architecture and BLoC/Cubit state management.
- Implemented a full authentication flow with automatic session refresh, resolving a concurrent token-refresh race condition with a Completer-based lock to prevent false session expiry under JWT token rotation.
- Built responsive navigation across tablet orientations using GoRouter's StatefulShellRoute, and a real-time connectivity banner backed by a dedicated monitoring layer.
- Designed the end-to-end order flow (table selection, menu selection, cart) integrated with a Django REST Framework backend over Dio.

PROJECTS

Splash Vault | *Full-Stack Wallpaper App* — *Flutter, Node.js/Express, MongoDB*

- Built a full-stack wallpaper browsing app with Pexels API integration, search, pagination, and category browsing across 8 preset categories.
- Implemented a real-time favorites system using Hive for local persistence and a reactive BLoC architecture to prevent data loss across state transitions.
- Applied clean architecture (data/domain/presentation layers) with an in-memory caching strategy to reduce redundant network calls.

Academia | *Cross-Platform Learning Management System* — *Flutter, Supabase, Firebase*

- Developed a multi-module classroom platform supporting notices, assignments, submissions, and file management, with Flutter and Supabase.
- Implemented cloud file upload/download, assignment submission and resubmission workflows, and timestamp-based unread-notice tracking using BLoC.
- Integrated real-time push notifications using Supabase database triggers and Edge Functions with Firebase Cloud Messaging, improving response time to assignment updates.

Let's Chat | *Real-Time Messaging App* — *Flutter, Firebase*

- Built a real-time messaging app with Firebase, including authentication, live chat via database streams, and friend management (add/remove).
- Structured data models for users and conversations to support low-latency, dynamic UI updates, demonstrating reactive-programming fundamentals.
